General problems

People living in slums (% of urban population)

The slum population in South East Asia remains worrying in 2014.

Crime

Health

Narcotic

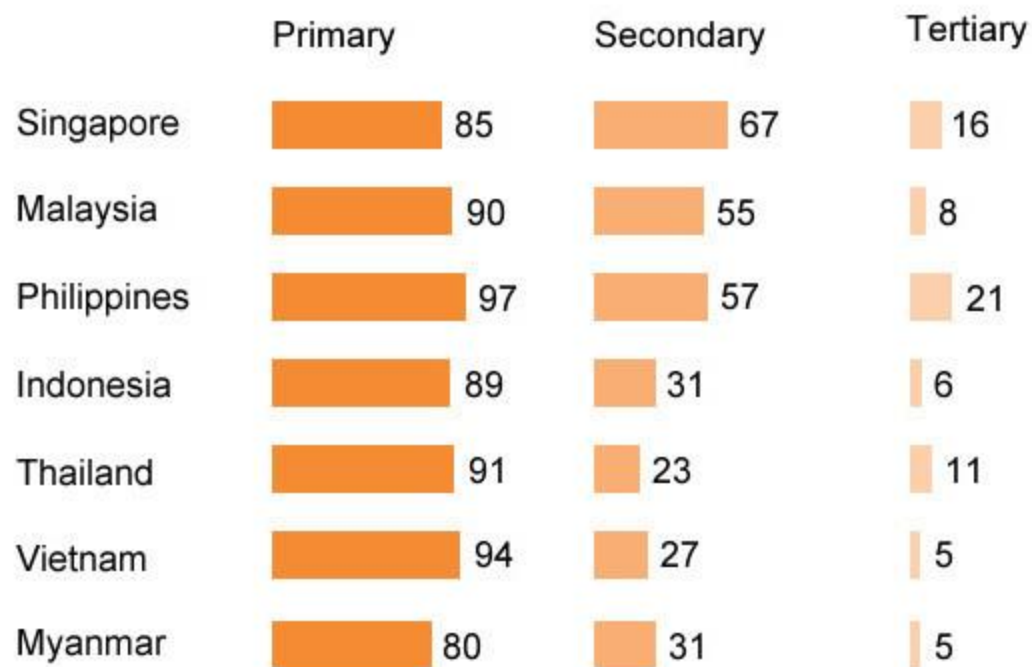

Environment

The problem will continue to increase if there is nothing changed. For example, Covid-19 pandemic will spread easily in overcrowded area due to limited spaces.

Key Issue 1: Education and Employment

Highest Level of Education Attained

(% of graduates in overall population)

Source: Human Capital Outlook: ASEAN 2016, World Economic Forum

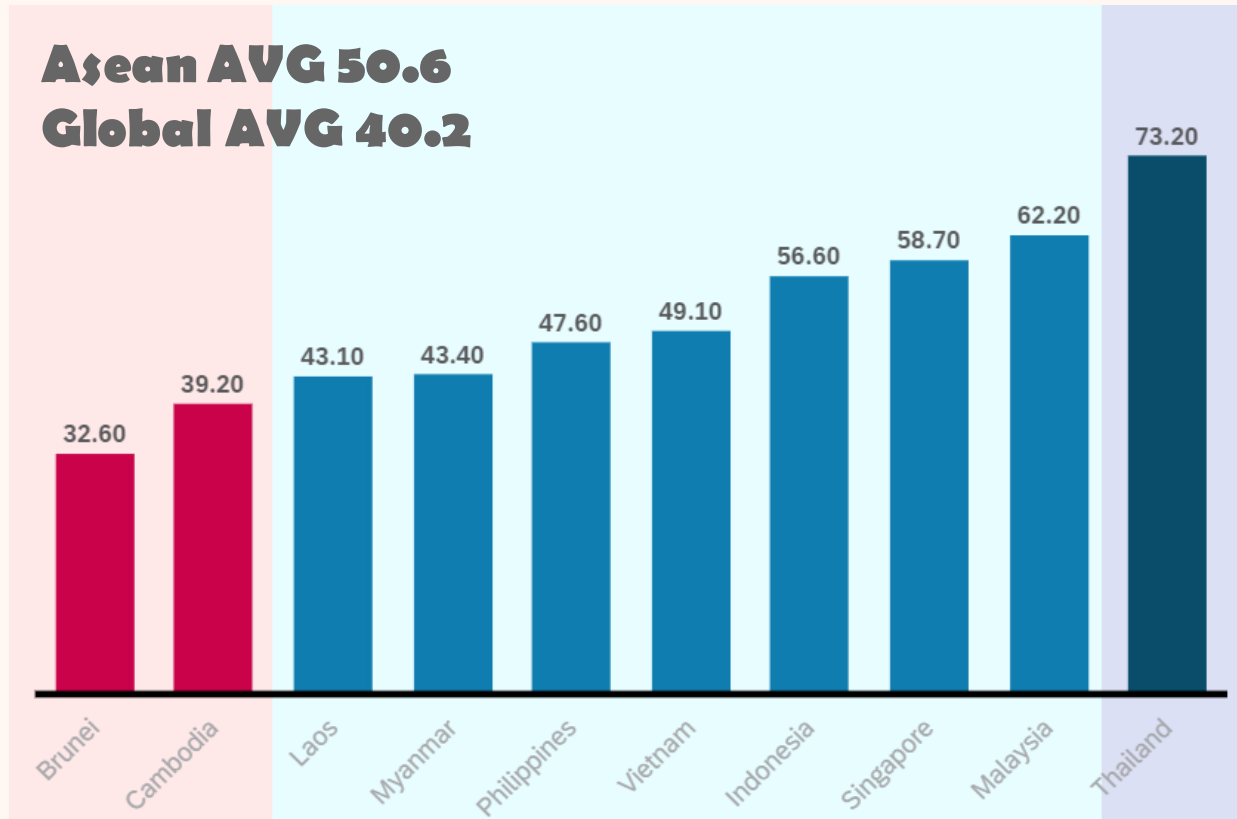

The **education** rate of the total population affects the skills and the abilities of the workers including average income, **employment rates**, and certain job positions. These problems are usually caused by a lack of resources.

Majority of the slum population never received **proper education** and even those who did, had to **drop-out** for reasons like poverty, lack of educational facilities and **ignorance**.

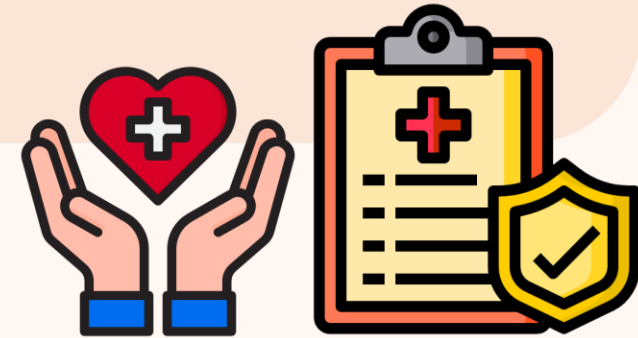

Key Issue 2: Health Security

Global Health Security index

Health Security is very important in ASEAN. There are many countries that have been **increasing** in the number of **death** due to inaccessibility to services and insufficient resources such as hospital beds, medical equipment, and physician.

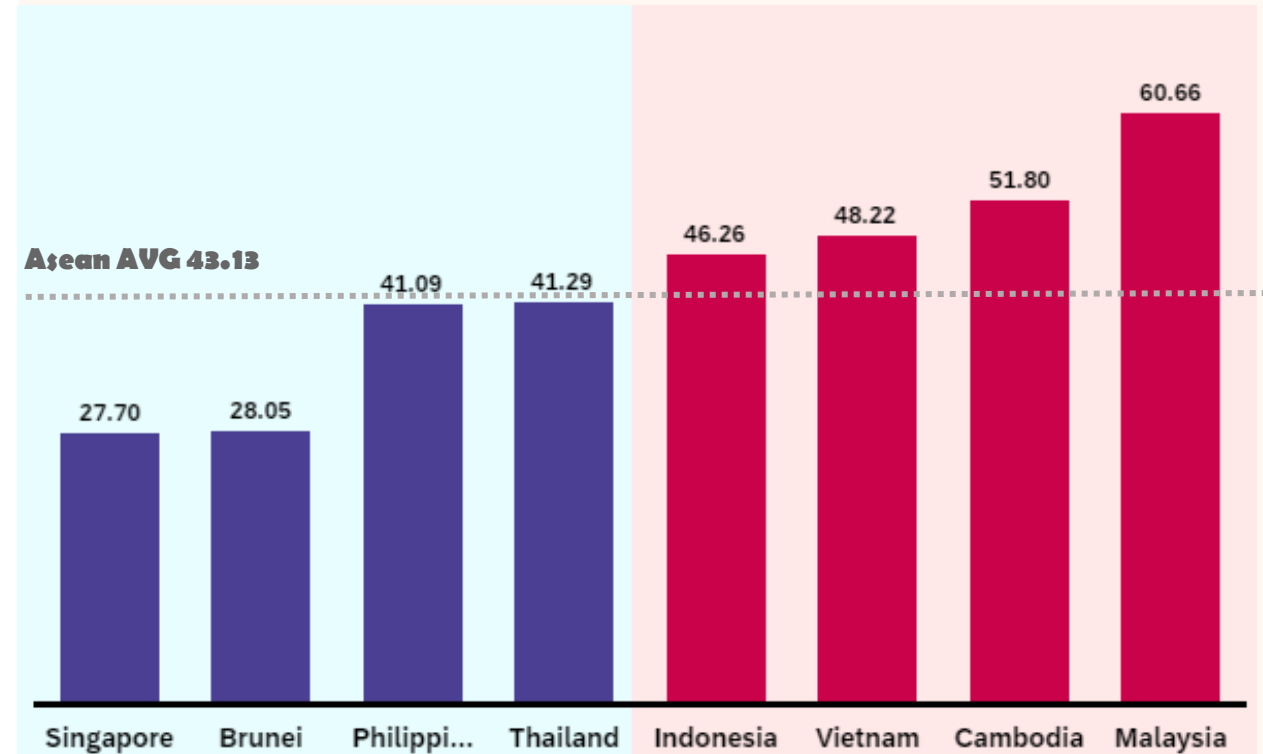

GHS Index is the comprehensive assessment of global health security capabilities in **195 countries**. Most ASEAN countries are more than the world average but those countries still have problems due to **lack of medical services**.

Key Issue 3: Crime rate

The **crime rate** affects the safety of people's lives. It also affects the **death rate** and the fear of tourists. Studies show that the number of slums correlates the number of crime rates and drugs.

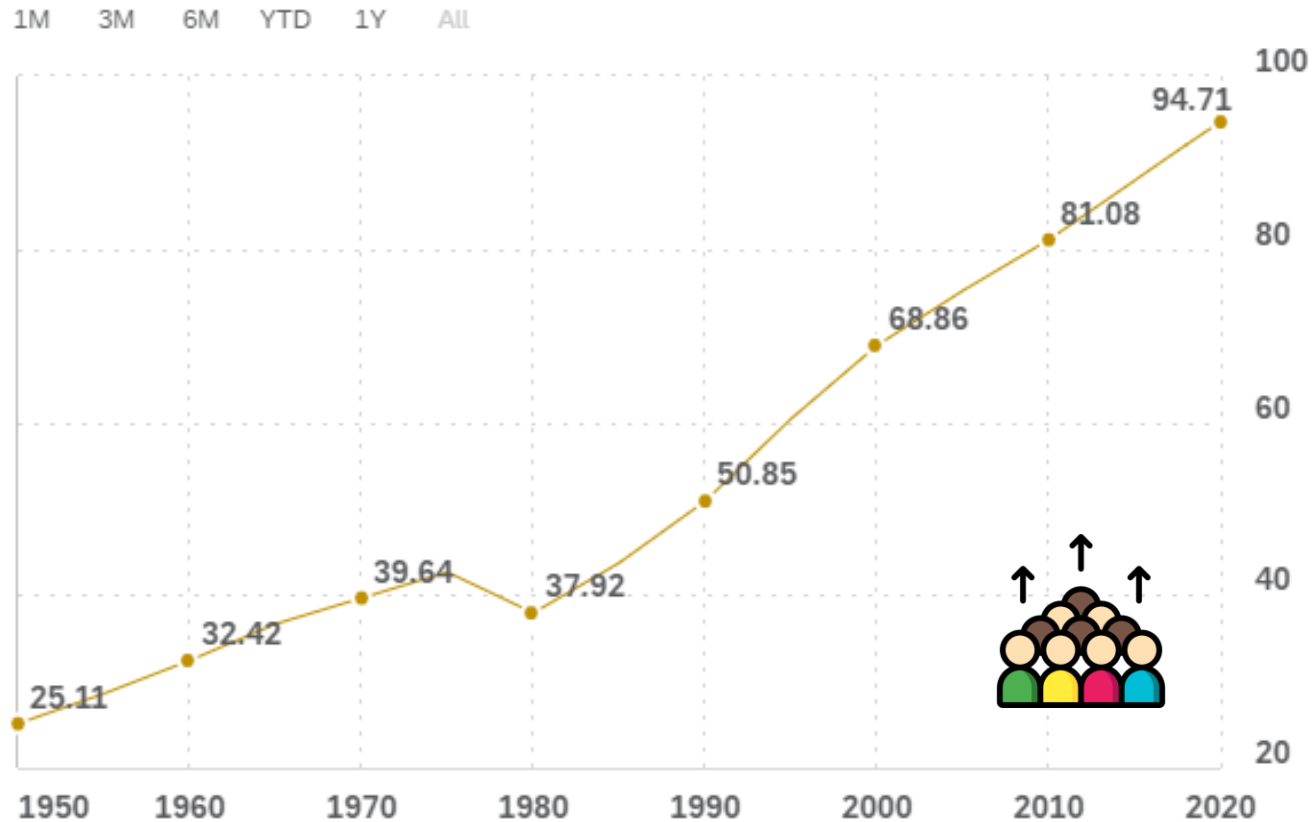

Crime rate in ASEAN

Crime rate is calculated by dividing the number of reported **crimes** by the **total population**, and then the result is multiplied by 100,000.

Cambodia population density (people per sq. km)

More than **half** of the total population is living in a slum.

There will be **8,125** crime cases per day.

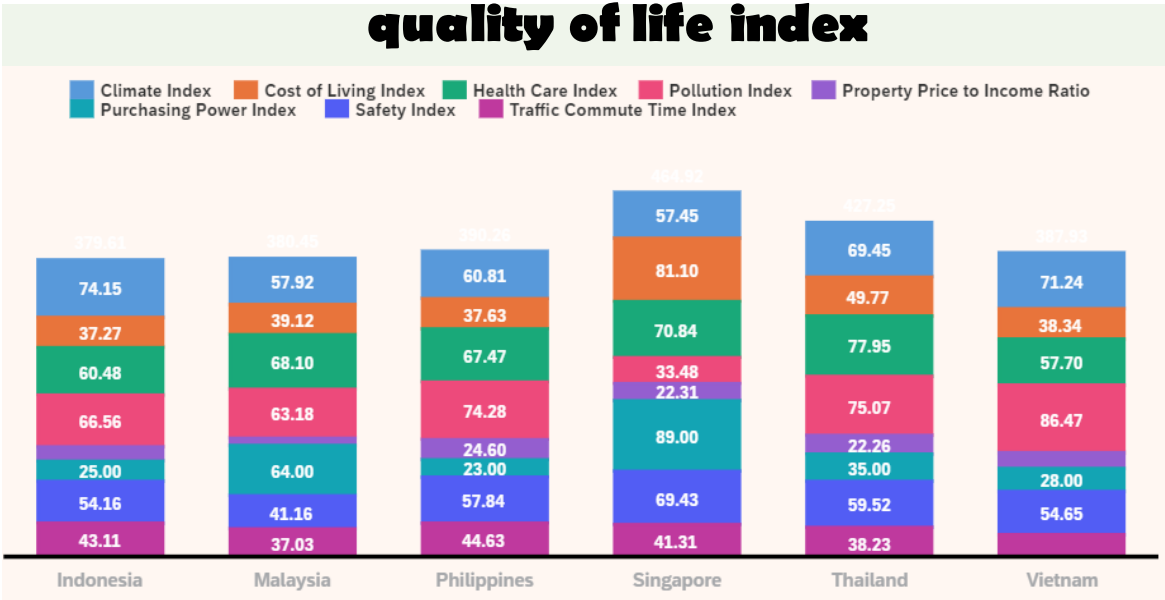

Cambodia's rural communities lack of clean water and proper sanitation, and generational poverty is a serious problem in the country. An **increasing population** would put a further **strain on those resources** that the country already lacks and **worsen its poverty problem**.

An aerial photograph of a densely populated urban area, likely a slum. The foreground shows a large, chaotic pile of garbage and debris, including plastic waste, cardboard, and metal scraps. In the middle ground, a busy street is filled with various vehicles, including cars, motorcycles, and trucks. The buildings are closely packed, many with corrugated metal roofs and some with blue tarps. A semi-transparent white box with the text "What can we do to solve these problems?" is overlaid on the center of the image. The background shows more buildings and a clear sky.

What can we do to solve these problems?

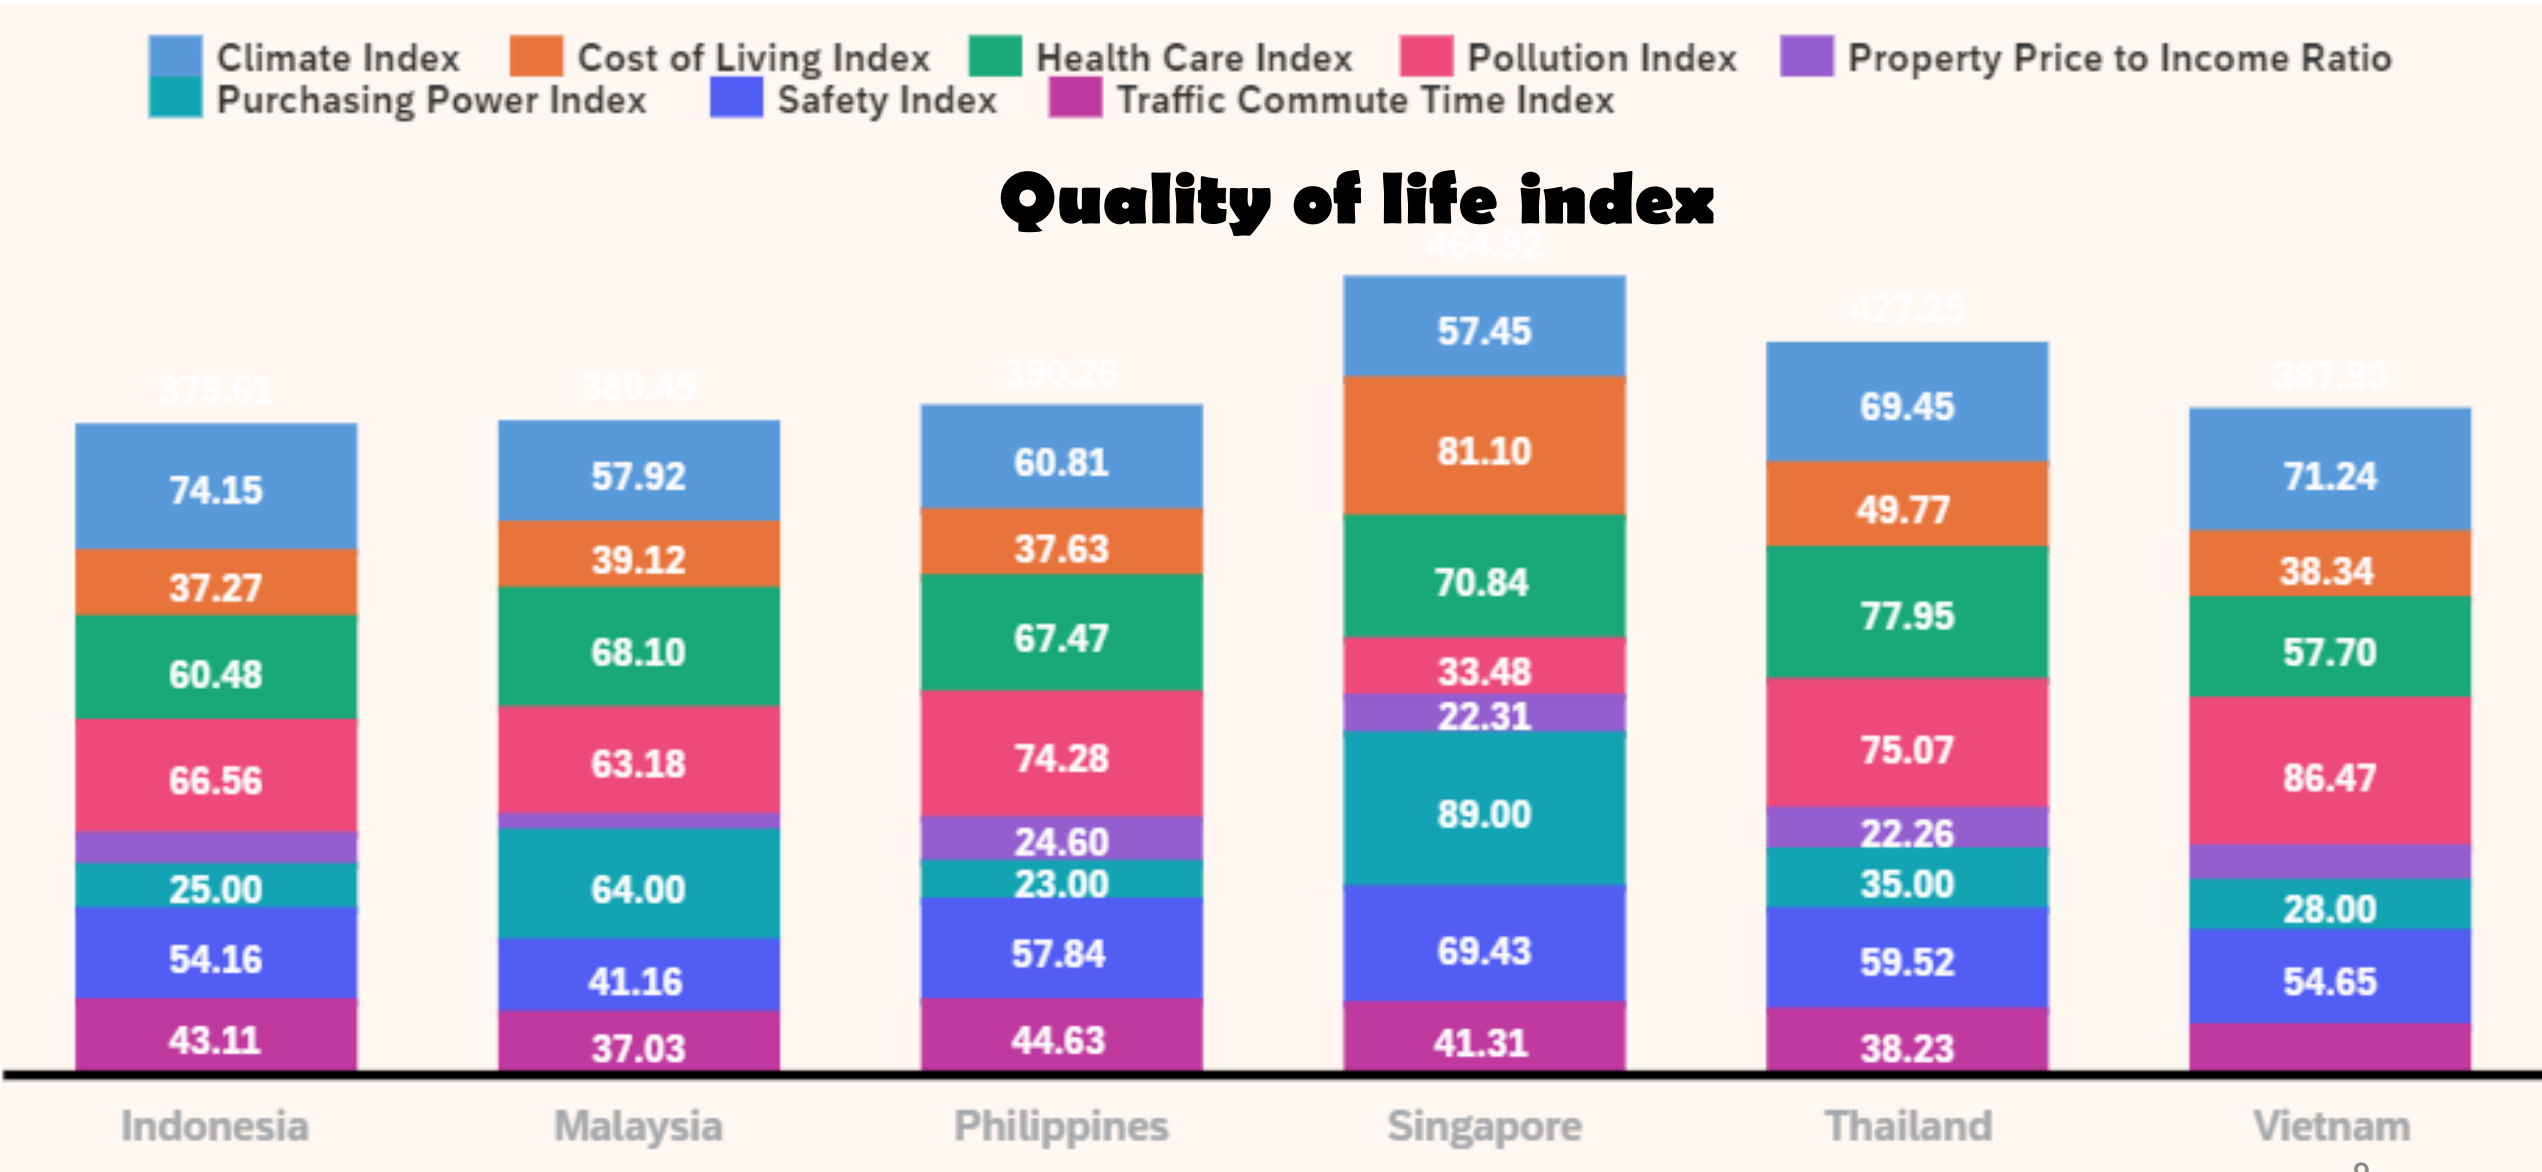

Recommendation 1: Planning and designing of a new city plan for low-income people

Design a new city plan by taking into account of various factors, including infrastructure, public transport, health services, schools and police stations.

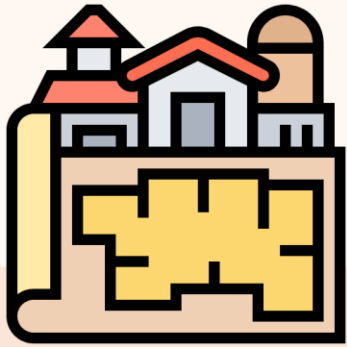

Such actions will improve the **quality of life** and people in the community including a **better environment** and services that can provide support to the use of people in community sufficiently which will be able to solve the problems of **slum communities sustainably**.

Recommendation 1 : Planning and designing of a new city plan for low-income people

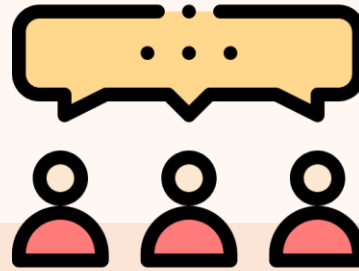

Recommendation 2 : Improve community area and housing development

Phase 1

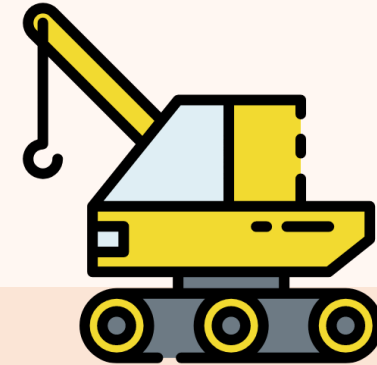

Design an urban plan to improve the slum and urban area.

Phase 2

Explain objectives to the people in the area and improve their quality of life.

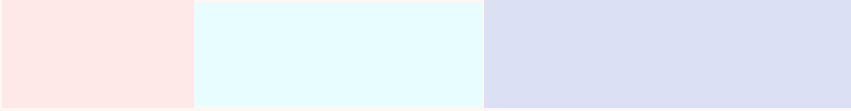

Phase 3

Expropriating and constructing the area.

Q & A

Recommendation : Learn and Earn

Education

We need to **provide education** in slum areas and also motivate people in a slum.

If the children are thoroughly educated and have enough schools to support them, they will be knowledgeable and can work in a career that requires a certain level of skills.

Building Career

We need to provide a training for formal employment to **empower the underprivileged** living by tapping their potential, teaching them the **essential skills** and creating employment opportunities.
